

Floral Whispers

PCB for Designers – 2023
Designed by Huiyi Huang

"Floral Whispers" is an interactive installation that simulates the ecosystem between flowers and pollinators. In nature, many flowers briefly release floral scents (VOCs) to attract pollinators and communicate with surrounding flowers to enhance their pollination rates. In this installation, participants take on the role of pollinators and interact with the flowers. When participants lightly touches any petal, a random flower nearby will illuminate and release a fragrance, enticing participants to engage in "pollination," providing a multisensory experience involving touch, sight,
